Rotary-Nut Series Precision Ball Screw/Spline

BNS/NS

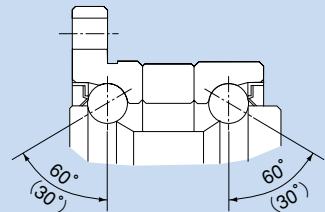

Japanese patent No. 2060726 (model NS), 2060727 (model BNS)

Structure of Precision Ball Screw/Spline

Structure of Support Bearing Model BNS-A

Structure of Support Bearing Model BNS

Structure and Features

The Ball Screw/Spline is a linear-rotary unit that contains Ball Screw grooves and Ball Spline grooves crossing with each other on a single shaft. The nuts of the Ball Screw and the Ball Spline have dedicated support bearings directly embedded on the circumference of the nuts.

The Ball Screw/Spline is capable of performing three (rotary, linear and spiral) modes of motion with a single shaft by rotating or stopping the ball screw nut or the spline nut.

It is optimal for machines using a combination of rotary and linear motions, such as a SCARA robot's Z-axis, assembly robot, automatic loader, and machining center's ATC equipment.

● Zero Axial Clearance

The Ball Spline has an angular-contact structure that causes no backlash in the rotational direction, enabling highly accurate positioning.

● Lightweight and Compact

Since the ball screw nut is integrated with the support bearing, highly accurate and compact design is allowed. In addition, small inertia through the lightweight ball screw nut ensures high responsiveness.

● Smooth Motion with Low Noise

As the Ball Screw is based on an end-cap mechanism, smooth motion with low noise is achieved.

● Highly Rigid Support Bearing

The support bearing on the Ball Screw has a contact angle of 60° in the axial direction while that on the Ball Spline has a contact angle of 30° in the moment direction, thus provide a highly rigid shaft support.

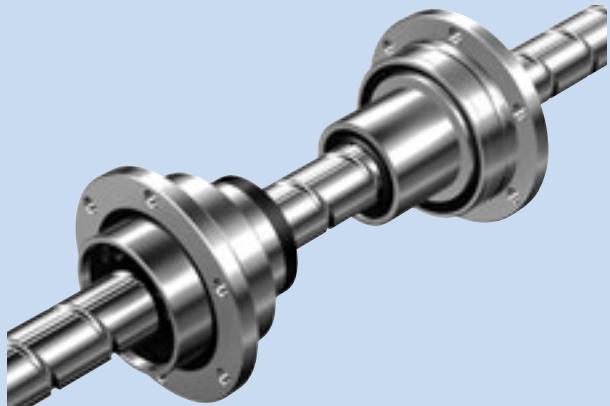

In addition, a dedicated rubber seal is attached as standard to prevent entry of foreign material.

● Easy Installation

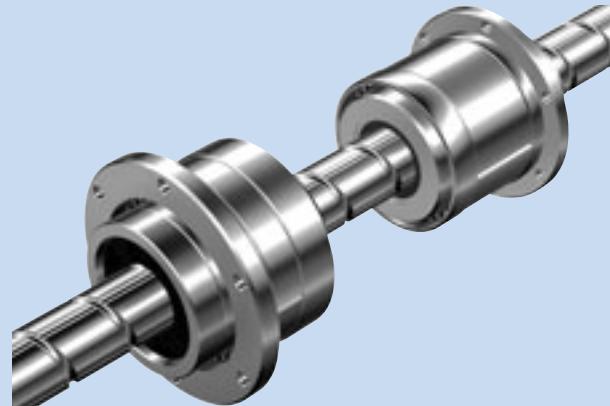

The ball spline nut is designed so that balls do not fall off even if the spline nut is removed from the shaft, thus making installation easy. The Ball Screw/Spline can easily be mounted simply by securing it to the housing with bolts (for the housing's inner-diameter tolerance, H7 is recommended).

Types

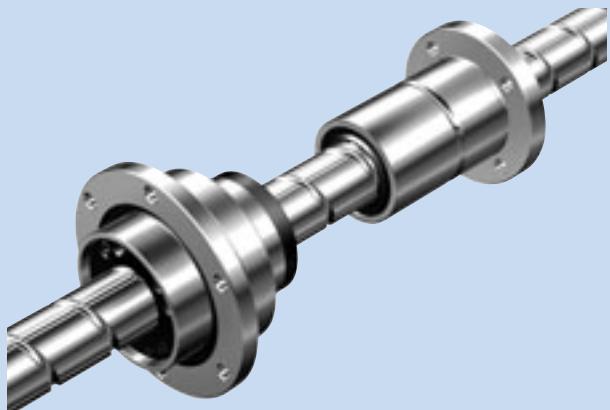

Model BNS-A [compact type: linear motion + rotary motion]

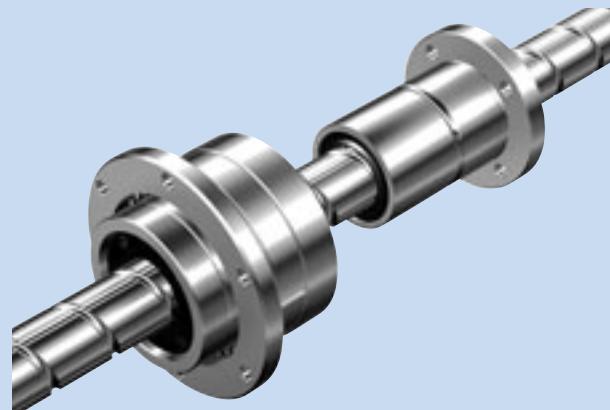

Model BNS [heavy-load type: linear motion + rotary motion]

Model NS-A [compact type: linear motion]

Model NS [heavy-load type: linear motion]

Static Safety Factor

It is necessary to take into account a static safety factor indicated in Table 1 against the axial load that is applied on the Ball Screw. When studying the static safety factor, a basic static load rating C_{a} is required.

Ball Screw Unit

[Basic Static Load Rating C_{a}]

When a Ball Screw receives an excessive load or a large impact load while it is stationary or in motion, a local permanent deformation occurs between the raceway and the steel ball. If the permanent deformation exceeds a certain limit, it will prevent the Ball Screw from smoothly moving.

It is recognized that in general there will be no operational problem if the amount of permanent deformation is up to approximately 0.0001 of the steel ball diameter. The load present in such cases is called basic static load rating C_{a} .

[Static Safety Factor]

$$fs \leq \frac{C_{\text{a}}}{F_a}$$

fs : Static safety factor (see Table 1)

C_{a} : Basic static load rating (kN) (see the corresponding dimensional table)

F_a : Axial load (kN)

Table 1 Static Safety Factor

| Machine using the Ball Screw | Load conditions | Lower limit of fs |
|------------------------------|------------------------------|---------------------|
| General industrial machinery | Without vibrations or impact | 1.0 to 1.3 |
| | With vibrations or impact | 2.0 to 3.0 |
| Machine tools | Without vibrations or impact | 1.0 to 1.5 |
| | With vibrations or impact | 2.5 to 7.0 |

Ball Spline Unit

[Basic Static Load Rating C_0]

When a Ball Spline receives an excessive load or a large impact load while it is stationary or in motion, a local permanent deformation occurs between the raceway and the rolling element. If the permanent deformation exceeds a certain limit, it will prevent the Ball Spline from smoothly moving.

The basic static load rating is a static load with a constant direction and magnitude whereby the sum of the permanent deformation of the rolling element and that of the raceway on the contact area under the maximum stress is 0.0001 times the rolling element diameter. With the Ball Spline, it is defined in terms of radial load. Therefore, the basic static load rating is considered to be the limit of the static permissible load rating.

[Static Safety Factor fs]

When the Ball Spline is stationary or in motion, an unexpected external force may be applied through inertia caused by vibrations, impact or start/stop. It is necessary to take into account a static safety factor against such a working load.

A static safety factor (fs) of a Ball Spline is expressed in how many times greater is the load capacity (basic static load rating C_0) than the load applied on the Ball Spline.

$$fs = \frac{C_0}{P}$$

fs : Static safety factor

C_0 : Basic static load rating (N)

P : Calculated load (N)

Rated Life and Service Life Time

Ball Screw Unit

[Basic Dynamic Load Rating Ca]

Basic dynamic load rating C_a is used to calculate the service life of a Ball Screw in motion with its ball screw nut being under a load. The basic dynamic load rating C_a is an axial load under which the rated life of 90% of a group of the same Ball Screw units independently operating is 10^6 rev (1 million revolutions).

[Rated Life]

The service life of a Ball Screw is obtained from the equation below using the basic dynamic load rating and the axial load.

$$L = \left(\frac{C_a}{f_w \cdot F_a} \right)^3 \times 10^6$$

L : Rated life (rev)

C_a : Basic dynamic load rating (N) (see the corresponding dimensional table)

F_a : Axial load (N)

f_w : Load factor (see Table 2)

Table 2 Load Factor

| Vibrations/impact | Velocity (V) | f_w |
|-------------------|---------------------------------------|------------|
| Faint | Very low $V \leq 0.25$ m/s | 1.0 to 1.2 |
| Weak | Low $0.25 \leq V \leq 1.0$ m/s | 1.2 to 1.5 |
| Medium | Moderate $1.0 \leq V \leq 2.0$ m/s | 1.5 to 2.0 |
| Strong | High $2.0 \text{ m/s} < V$ | 2.0 to 3.5 |

[Service Life Time]

When the rated life (L) has been determined, the service life time is obtained from the following equation if the stroke length and the number of reciprocations are constant.

$$L_h = \frac{L \times \ell}{2 \times \ell_s \times n_1 \times 60}$$

L_h : Service life time (h)
 ℓ_s : Stroke length (mm)
 n_1 : Revolutions per minute (min⁻¹)
 ℓ : Lead (mm)

(For details, see the General Catalog.)

Ball Spline Unit

[Rated Life When a Torque is Applied]

$$L = \left(\frac{f_t \cdot f_c}{f_w} \cdot \frac{C_t}{T_c} \right)^3 \times 50$$

[Rated Life When a Radial Load is Applied]

$$L = \left(\frac{f_t \cdot f_c}{f_w} \cdot \frac{C}{P_c} \right)^3 \times 50$$

L : Rated life (km)
 C_t : Basic dynamic torque rating (N·m)
 T_c : Calculated load torque (N·m)
 C : Basic dynamic load rating (N)
 P_c : Calculated radial load (N)
 f_t : Temperature factor (see the General Catalog)
 f_c : Contact factor (see the General Catalog)
 f_w : Load factor (see the General Catalog)

[Service Life Time]

When the rated life (L) has been determined, the service life time is obtained if the stroke length and the number of oscillations are constant.

$$L_h = \frac{L \times 10^3}{2 \times \ell_s \times n_1 \times 60}$$

L_h : Service life time (h)
 ℓ_s : Stroke length (m)
 n_1 : Oscillations per minute (opm)

(For details, see the General Catalog.)

Accuracy

The Ball Screw/Spline is manufactured with the following specifications.

Ball Screw Unit

Axial clearance : 0 or below

Lead accuracy : C5

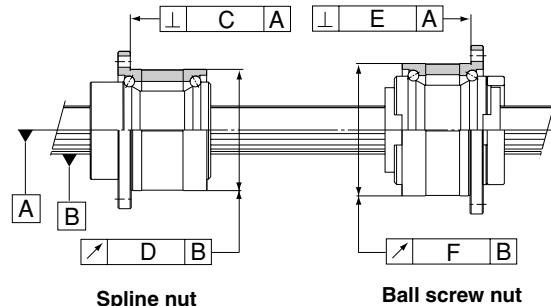

(For details of the specification values, see the General Catalog.)

Ball Spline Unit

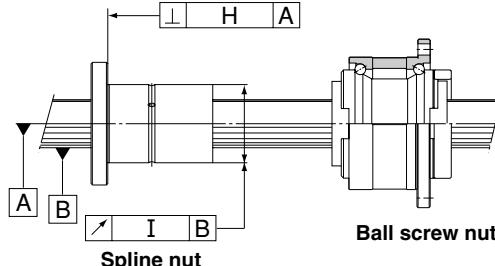

Clearance in the rotational direction : 0 or below (CL: light preload)

Accuracy : class H

(For details of the specification values, see the General Catalog.)

Action Patterns

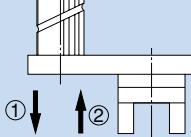

Basic Actions of Model BNS

| Motion | Action direction | Input | | Shaft motion | |
|---------------|------------------|--------------------------------|---------------------|-----------------------------|--|
| | | Ball Screw pulley | Ball Spline pulley | Vertical direction (speed) | Rotational direction (rotation speed) |
| 1. Vertical | ① | Vertical direction → downward | N_1 (Forward) | 0 | $V=N_1 \cdot \ell$ ($N_1 \neq 0$) |
| | | Rotational direction → 0 | | | |
| | ② | Vertical direction → upward | $-N_1$ (Reverse) | 0 | $V=-N_1 \cdot \ell$ ($N_1 \neq 0$) |
| | | Rotational direction → 0 | | | |
| 2. Rotational | ① | Vertical direction → 0 | N_1 (Forward) | 0 | N_2 (Forward) ($N_1 = N_2 \neq 0$) |
| | | Rotational direction → forward | | | |
| | ② | Vertical direction → 0 | $-N_1$ (Reverse) | 0 | $-N_2$ (Reverse) ($-N_1 = -N_2 \neq 0$) |
| | | Rotational direction → reverse | | | |
| 3. Spiral | ① | Vertical direction → upward | 0 | N_2 ($N_2 \neq 0$) | $V=N_2 \cdot \ell$ (Forward) |
| | | Rotational direction → forward | | | |
| | ② | Vertical direction → downward | 0 | $-N_2$ ($-N_2 \neq 0$) | $V=-N_2 \cdot \ell$ (Reverse) |
| | | Rotational direction → reverse | | | |

Basic Actions of Model NS

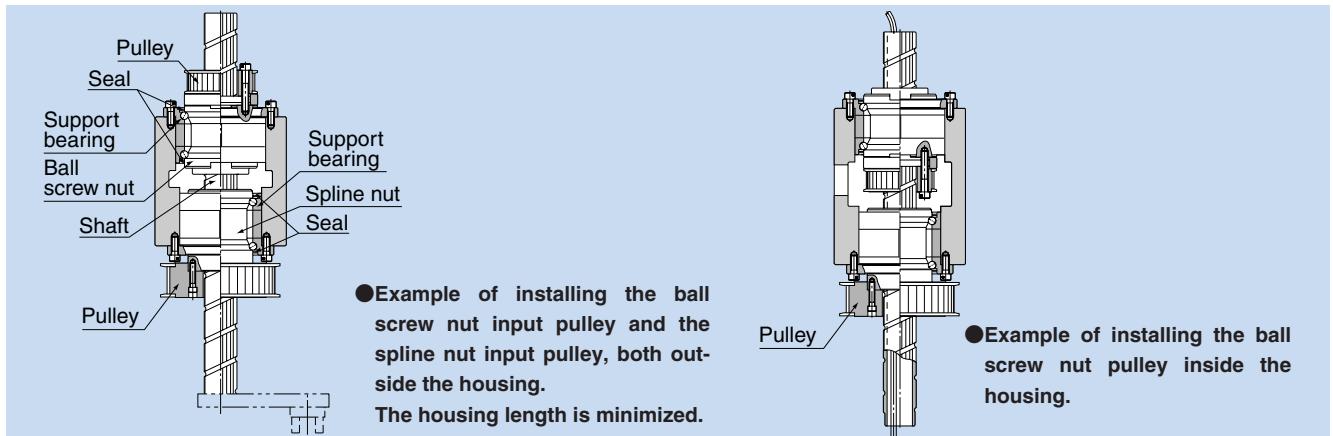

| Motion | Action direction | Input | Shaft motion |
|-------------|--|---------------------|---|
| | | Ball Screw pulley | Vertical direction (speed) |
| 1. Vertical | ① Vertical direction → downward  | N_1 (Forward) | $V=N_1 \cdot \ell$ ($N_1 \neq 0$) |
| | | $-N_1$ (Reverse) | $V=-N_1 \cdot \ell$ ($N_1 \neq 0$) |

Extended Actions of Model BNS

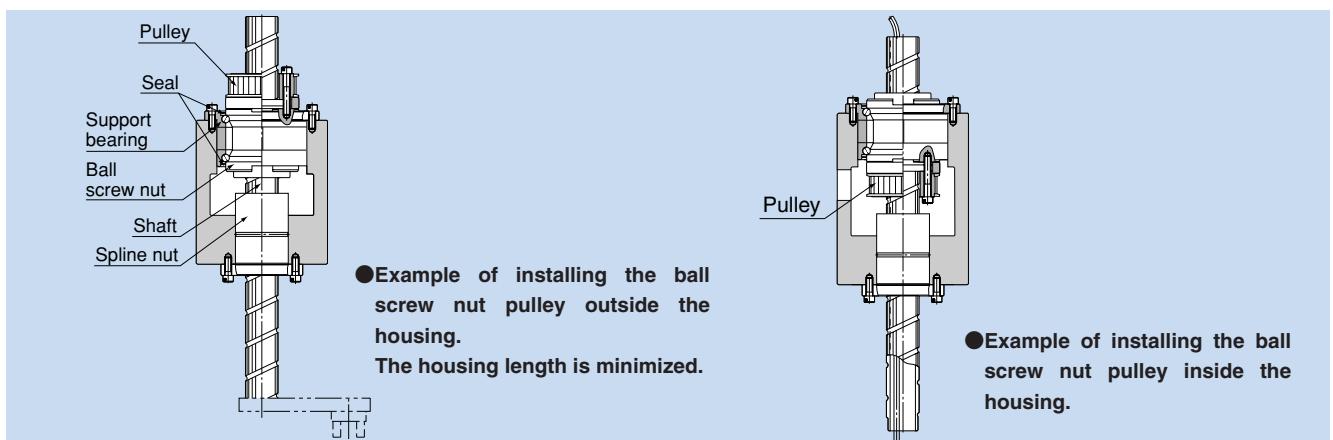

| Motion | Action direction | Input | | Shaft motion | |
|---|------------------|--|----------------------|---|--|
| | | Ball Screw pulley | Ball Spline pulley | Vertical direction (speed) | Rotational direction (rotation speed) |
| 1. Upward → downward → forward → upward → downward → reverse | ① | Vertical direction → upward (Reverse) | 0 | $V=-N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Vertical direction → downward (Forward) | 0 | $V=N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ③ | Rotational direction → forward N_1 | N_2 (Forward) | 0 | N_2 (Forward) ($N_1 = N_2 \neq 0$) |
| | ④ | Vertical direction → upward - N_1 | 0 | $V=-N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑤ | Vertical direction → downward N_1 | 0 | $V=N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑥ | Rotational direction → reverse - N_1 | - N_2 (Reverse) | 0 | - N_2 (Reverse) (- $N_1 = N_2 \neq 0$) |
| 2. Downward → upward → forward → downward → upward → reverse | ① | Vertical direction → downward N_1 | 0 | $V=N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Vertical direction → upward - N_1 | 0 | $V=-N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ③ | Rotational direction → forward N_1 | N_2 | 0 | N_2 ($N_1 = N_2 \neq 0$) |
| | ④ | Vertical direction → downward N_1 | 0 | $V=N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑤ | Vertical direction → upward - N_1 | 0 | $V=-N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑥ | Rotational direction → reverse - N_1 | - N_2 | 0 | - N_2 (- $N_1 = N_2 \neq 0$) |
| 3. Downward → forward → upward → reverse | ① | Vertical direction → downward N_1 | 0 | $V=N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Rotational direction → forward N_1 | N_2 | 0 | N_2 ($N_1 = N_2 \neq 0$) |
| | ③ | Vertical direction → upward - N_1 | 0 | $V=-N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ④ | Rotational direction → reverse - N_1 | - N_2 | 0 | - N_2 (- $N_1 = N_2 \neq 0$) |
| 4. Downward → upward → forward → reverse | ① | Vertical direction → downward N_1 | 0 | $V=N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Vertical direction → upward - N_1 | 0 | $V=-N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ③ | Rotational direction → reverse - N_1 | - N_2 | 0 | - N_2 (- $N_1 = N_2 \neq 0$) |
| | ④ | Rotational direction → forward N_1 | N_2 | 0 | N_2 ($N_1 = N_2 \neq 0$) |
